

# CONTENTS

<b>1: INTRODUCTION</b> .....	1-1	Other Trades .....	3-9
		Cranes and Hoists .....	3-9
<b>2: GENERAL OBJECTIVES IN FORMWORK</b>		Planning Examples .....	3-9
<b>BUILDING</b> .....	2-1	Trial Plans .....	3-10
How Formwork Affects Concrete Quality .....	2-1	Crane Size .....	3-11
Causes of Failures .....	2-1	Efficient Scheduling .....	3-11
Improper Stripping and Shore Removal .....	2-2	Planning Form Sizes .....	3-11
Inadequate Bracing .....	2-3	Cost Estimate .....	3-12
Vibration .....	2-4	Pier Strut Forming .....	3-12
Unstable Soil Under Mudsills, Shoring Not Plumb .....	2-4	Scheduling .....	3-13
Inadequate Control of Concrete Placement .....	2-5	Recheck Plan Details .....	3-13
When Formwork is Not at Fault .....	2-5	Steps in Planning for Maximum Reuse .....	3-14
Lack of Attention to Formwork Details .....	2-5	Detailing the Forms .....	3-15
Planning for Safety .....	2-5		
Supervision and Inspection .....	2-6	<b>4: MATERIALS, ACCESSORIES,</b>	
Platforms and Access for Workers .....	2-6	<b>PROPRIETARY PRODUCTS</b> .....	4-1
Control of Concreting Practices .....	2-7	Lumber .....	4-1
Improving Soil Bearing and Bracing .....	2-7	Lumber Finish and Sizes .....	4-3
Shoring and Reshoring .....	2-7	Stress Grading and Allowable Stresses .....	4-5
Relationship of Architect, Engineer,		Engineered Wood Products .....	4-8
and Contractor .....	2-8	Plywood .....	4-9
Maintaining and Coordinating Tolerances .....	2-9	Construction; Sizes Available .....	4-10
Preparing a Formwork Specification .....	2-9	Types and Grades .....	4-11
Design, Inspection, and Approval		Overlaid Plywood .....	4-12
of Formwork .....	2-10	Textured Surfaces .....	4-12
Stripping and Decentering .....	2-10	Strength Properties .....	4-13
Materials and Accessories Related to		Bending Plywood to Curved Surfaces .....	4-13
Finish of Exposed Concrete .....	2-11	Other Framing and Facing Materials .....	4-14
Measurement and Payment for Formwork .....	2-11	Reconstituted Wood Materials .....	4-14
How the Architect-Engineer Can		Steel .....	4-14
Reduce Form Costs .....	2-12	Aluminum .....	4-15
References .....	2-13	Glass-Fiber-Reinforced Plastic .....	4-16
		Fabric and Porous Forms .....	4-18
		Form Lining Materials .....	4-20
		Plastic Form Liners .....	4-20
		Rubber Liners .....	4-21
		Vacuum Liners .....	4-22
		Absorptive Form Liners .....	4-22
		Insulation and Insulating Forms .....	4-23
		Hardware and Fasteners .....	4-25
		Nails .....	4-25
		Wood Screws .....	4-28
		Bolts, Lag Screws, Other Connectors .....	4-28
		Ties .....	4-34
		Effect of Tie on Finished Surface .....	4-35
		Water Retaining Structures .....	4-36
		Anchors .....	4-36
		Hangers .....	4-37
		Form Jacks .....	4-37
		Spreaders and Spacers .....	4-38
		Steel Strapping .....	4-39
		Column Clamps .....	4-40
		Prefabricated Forms .....	4-41
		Panel Forms and Forming Systems .....	4-43
<b>3: OVERALL PLANNING</b> .....	3-1		
Development of a Basic System .....	3-1		
Compare Alternate Methods .....	3-1		
Examine Form Plan in Relation to Total Job .....	3-1		
Key Areas of Cost Reduction .....	3-2		
Planning for Maximum Reuse .....	3-2		
Developing a Practical Reuse Plan .....	3-3		
Comparing Reuse Schemes .....	3-4		
Economical Form Construction .....	3-4		
Job-Built Forms .....	3-4		
Materials and Hardware .....	3-5		
Where to Construct Forms .....	3-5		
Estimating Form Building Costs .....	3-6		
Purchased or Rented Forms .....	3-6		
Setting and Stripping .....	3-7		
Erecting and Stripping Cost Factors .....	3-7		
Other Costs Affected by Formwork Plan .....	3-8		
Crew Efficiency .....	3-8		
Concreting .....	3-8		
Bar Setting .....	3-8		

Pans and Domes for Concrete Joist Construction .....	4-45
Void and Duct Forms .....	4-45
Column Forms .....	4-47
Stay-In-Place Forms .....	4-49
Special Purpose and Custom-Made Forms .....	4-51
Shoring and Scaffolding .....	4-52
Vertical Shores .....	4-53
Scaffold-Type Shoring .....	4-54
Horizontal Shoring .....	4-57
References .....	4-58

## 5: LOADS AND PRESSURES ..... 5-1

Vertical Loads .....	5-1
Shoring Loads in Multistory Structures .....	5-3
Analyzing the Loads .....	5-4
Maximum Slab Loads .....	5-8
Maximum Shore Loads .....	5-8
Shoring System Design .....	5-8
Lateral Pressure of Fresh Concrete .....	5-8
Factors Affecting Lateral Pressure on Forms .....	5-12
Lateral Pressure Values for Form Design .....	5-14
Column Forms .....	5-15
Wall Forms .....	5-16
Uplift Pressure on Sloping Surfaces .....	5-18
Lateral Loads .....	5-18
Slab Forms .....	5-19
Wall Forms .....	5-20
Other Loads .....	5-21
Structures Designed for Composite Action .....	5-21
Post-Tensioned Structures .....	5-22
Forms for External Vibration .....	5-22
References .....	5-23

## 6: FORM DESIGN ..... 6-1

Notation .....	6-1
Basic Simplifications .....	6-2
Beam Formulas .....	6-4
Design Criteria .....	6-4
Allowable Stresses .....	6-4
Deflection .....	6-5
Bending .....	6-6
Adjustment Factors for Bending Stress .....	6-7
Shear .....	6-8
Bearing .....	6-9
Bearing Examples .....	6-10
Wall, Slab, and Beam Form Design .....	6-11
Wall Forms .....	6-11
Slab Forms .....	6-16
Beam Forms .....	6-20
Form Accessories .....	6-23
Ties .....	6-23
Hangers .....	6-24
Anchors .....	6-25
Column Form Design .....	6-25
General Procedure .....	6-26
Types of Column Forms .....	6-26
Column Form Example .....	6-27
Shoring and Scaffolding .....	6-30

Simple Wood Shores .....	6-30
Tubular Steel Shores .....	6-33
Tubular Steel Scaffold-Type Shoring .....	6-34
Other Patented Shoring Devices .....	6-35
Multistory Work .....	6-35
More Concentrated Shore Loads .....	6-39
Support for Shoring .....	6-39
Bracing for Lateral Loads .....	6-40
Wall Forms .....	6-40
Bracing of Slab Forms Supported by Individual Shores .....	6-41
Camber and Adjustment for Settlement .....	6-43
Anticipated Deflection or Settlement .....	6-43
Deflection of Finished Structure .....	6-44
Total Allowance for Camber and Adjustments .....	6-44
References .....	6-45

## 7: DESIGN TABLES ..... 7-1

Sheathing Design, Tables 7-2-7-4 .....	7-1
Joists, Studs, Beams, Tables 7-5-7-7 .....	7-2
Double Members, Tables 7-8 - 7-10 .....	7-2
Wood Shores, Tables 7-11, 7-12 .....	7-3
Form Design Using the Tables .....	7-4
Flat Slabs .....	7-4
Column Clamp Spacing .....	7-5
Beam Bottom .....	7-5
Wall Forms .....	7-6
Design Tables .....	7-7

## 8: FORMWORK DRAWINGS ..... 8-1

General Layout and Detail Drawings .....	8-1
Check List of Details .....	8-11
Recheck of Structural Drawings .....	8-12
Drawing Approval .....	8-13

## 9: BUILDING AND ERECTING THE FORMWORK ..... 9-1

Carpentry Shop and Job Mill .....	9-1
Footings .....	9-4
Wall Footings .....	9-4
Column Footings .....	9-5
Stepped Column Footings .....	9-7
Sloped Footing Forms .....	9-7
Combined Footing Forms .....	9-9
Slab on Grade and Paving Work .....	9-9
Highway and Airport Paving .....	9-10
Curb and Gutter Forms .....	9-11
Wall Forms .....	9-12
Built-In-Place Forms .....	9-12
Blind-Side and Single-Side Wall Forms .....	9-16
Prefabricated Panel Systems .....	9-18
"Giant" Forms and Ganged Panel Forms .....	9-19
Square Corners .....	9-21
Curved Walls and Round Corners .....	9-23
Wall Openings .....	9-26
Joints .....	9-27
ACI Tolerances for Walls .....	9-29
Column Forms .....	9-30
ACI Tolerances .....	9-31

Erection Practices .....	9-31	Incremental Launching or Pushout Method .....	9-83
Square or Rectangular Columns .....	9-32	Making Precast Bridge Segments .....	9-84
Round Columns .....	9-35	Long Line Segment Casting .....	9-84
Column Heads .....	9-36	Short Line Precasting .....	9-85
Changing Size of Form Panels .....	9-36	General Requirements, Cast-in-Place	
Beam or Girder Forms .....	9-36	Segmental Bridge Formwork .....	9-85
Bottoms .....	9-37	Flexibility Needs .....	9-85
Sides .....	9-39	Voids, Inserts, Attachments .....	9-86
Ties and Braces .....	9-41	Joint Surfaces .....	9-86
Suspended Forms for Fireproofing		Vibration .....	9-86
Composite Construction .....	9-41	Heated Curing Considerations .....	9-86
Panel Assembly and Erection .....	9-42	Tolerance Requirements .....	9-87
Beam and Girder Form Tolerances .....	9-43	References .....	9-87
Slab Forms .....	9-44		
Beam and Slab Construction .....	9-44	<b>10: USING THE FORMS .....</b>	<b>10-1</b>
Flat Slabs, Flat Plates .....	9-45	Placing Reinforcement and Inserts .....	10-2
Concrete Joist Construction .....	9-48	Support for Reinforcing Bars .....	10-3
One-Way Joist System .....	9-48	Positioning Bars-, Tolerances in Placement .....	10-4
Two-Way Joist or Waffle Slab .....	9-49	Preparation for Concreting .....	10-5
Flying Form System .....	9-50	Form Release Agents .....	10-6
Slabs Supported on Steel Beams		Sticking and Staining .....	10-8
or Precast Concrete Beams .....	9-51	Use of Water on the Forms .....	10-9
ACI Tolerances for Slab Work .....	9-52	Inspection and Form Watching .....	10-9
Shoring and Scaffolding .....	9-53	Before Concreting .....	10-9
Mudsills or Shoring Foundations .....	9-54	During and After Concreting .....	10-12
Wood Shores .....	9-55	Placing and Vibrating—Effect on Formwork .....	10-13
Adjustable Shores .....	9-56	Removal of Forms and Shores .....	10-13
Scaffold-Type Shoring .....	9-56	Stripping Time Based on Concrete Strength .....	10-14
Horizontal Shoring .....	9-57	Form Removal Related to Curing Needs .....	10-16
Adjustment and Jacking .....	9-58	Stripping Techniques .....	10-16
Permanent Shores .....	9-58	Multistory Buildings .....	10-17
Composite Construction .....	9-59	Reshoring .....	10-18
<b>BRIDGE FORMWORK .....</b>	<b>9-59</b>	Removal of Reshores .....	10-20
Foundations .....	9-59	Heavy Industrial Structures .....	10-20
Caissons .....	9-60	Care and Storage of Forms and Accessories .....	10-20
Piles .....	9-62	Cold Weather Protection .....	10-22
Rock or Soil Offering Direct Support .....	9-63	Avoiding Thermal Shock .....	10-25
Piers .....	9-64	References .....	10-25
Forms Moved for Reuse .....	9-64		
Round Piers .....	9-64	<b>11: FORMWORK FOR</b>	
Stonework Facing .....	9-65	<b>ARCHITECTURAL CONCRETE .....</b>	<b>11-1</b>
Massive Piers .....	9-65	Specifications: Defining Quality .....	11-1
Pier Caps and Tie Struts .....	9-68	Architectural Formwork Design .....	11-2
Superstructures .....	9-68	Loads and Pressures .....	11-2
Monolithic—Simple Slab, Beam, and Girder .....	9-68	Design Standards .....	11-3
Cast-In-Place Deck Supported on		Formwork Details .....	11-5
Steel or Precast Girders .....	9-70	Exposed Concrete Surfaces .....	11-5
Expansion Joints .....	9-71	Smooth As-Cast Surfaces .....	11-6
Overhangs and Sidewalks .....	9-72	Textured As-Cast Surfaces .....	11-10
Support for Superstructure Forms .....	9-73	Precast Panels as Forms or Liners .....	11-14
Stripping Bridge Forms .....	9-75	Construction of Architectural Forms .....	11-16
Arch Bridges .....	9-76	Walls .....	11-17
Segmental Box Girder Bridge Construction .....	9-77	Columns and Pilasters .....	11-19
Cast-in-Place Segmental Construction .....	9-78	Spandrels and Parapets .....	11-19
Precast Segmental Construction .....	9-79	Soffits .....	11-20
Principal Erection Methods .....	9-79	Cantilevers .....	11-20
Balanced Cantilever Erection .....	9-79	Ornamental Detail .....	11-21
Span-by-Span Construction, Stepping Formwork .....	9-81	Erection Practices .....	11-27
Progressive Placing .....	9-82		

Construction and Contraction Joints .....	11-29
Stripping.....	11-30
Cleanup and Repair .....	11-32
References .....	11-32
<b>12: SHELLS, DOMES, FOLDED PLATES .....</b>	<b>12-1</b>
Shell Form Design Considerations .....	12-3
Loads .....	12-5
Details .....	12-6
Drawings .....	12-8
Building the Forms .....	12-8
Placing Concrete .....	12-10
Form Removal .....	12-11
Strength Requirements .....	12-13
Decentering Schedule .....	12-14
Inflated Forming Methods .....	12-14
References .....	12-18
<b>13: MASS CONCRETE .....</b>	<b>13-1</b>
Low Lift Formwork .....	13-2
Types of Cantilever Forms .....	13-2
Design Considerations .....	13-4
Loads on the Formwork .....	13-5
Anchorage Accessories .....	13-6
Other Design Features .....	13-9
Handling, Erecting, Stripping .....	13-9
Non-Cantilevered Formwork .....	13-11
Roller-Compacted Mass Concrete .....	13-11
Foundations or Starting Lifts .....	13-13
Curing, Joint Cleanup, Insulation .....	13-14
Planning and Supervision .....	13-15
Tolerances .....	13-17
References .....	13-17
<b>14: TUNNELS AND SHAFTS .....</b>	<b>14-1</b>
Tunnel Forming Components .....	14-1
Curb Forms .....	14-2
Invert Forms .....	14-2
Arch Forms .....	14-4
Concrete Placement Methods .....	14-6
Continuous Advancing Slope .....	14-6
Bulkhead Method .....	14-7
Cut and Cover Construction .....	14-7
General Design Considerations .....	14-8
Influence of Placing Equipment .....	14-8
Loads and Pressures .....	14-9
Vibration and Form Access .....	14-12
Form Construction .....	14-12
Stripping Time .....	14-12
Tolerances .....	14-13
Shafts .....	14-13
<b>15: SPECIAL TECHNIQUES IN CONCRETE CONSTRUCTION.....</b>	<b>15-1</b>
Slipform Construction .....	15-1
Vertical Slipforms .....	15-2
High Capacity Jacking Systems .....	15-8
Sliding Operation .....	15-8

Curing and Finishing .....	15-11
Form Stripping .....	15-11
Winter Concreting .....	15-12
Horizontal Slipforms .....	15-12
Tunnel Inverts .....	15-13
Concrete on Slopes .....	15-13
Channels and Canals .....	15-13
Highway Pavers .....	15-15
Cast-in-Place Pipe .....	15-15
Traveling Forms .....	15-16
Design Considerations .....	15-17
Tilt-Up Construction .....	15-21
Curing and Bond-Breaking Compounds .....	15-22
Curved Tilt-Up Panels .....	15-23
Lift Method of Construction .....	15-23
Forming and Casting .....	15-25
Stab Separation .....	15-25
Preplaced Aggregate Concrete .....	15-25
Lateral Pressure .....	15-26
Form Construction and Materials .....	15-27
Finishing .....	15-27
Shotcrete .....	15-27
Forms and Ground Wires .....	15-28
Tremie Concrete .....	15-29
<b>PRECAST CONCRETE .....</b>	<b>15-29</b>
Advantages of Precasting .....	15-30
Formwork .....	15-31
Suggested Tolerances .....	15-31
Materials .....	15-32
Layout of Casting Area .....	15-33
Casting Bed .....	15-33
Form Construction .....	15-33
Stripping .....	15-34
Erection and Joints .....	15-35
